UTM

Unified Threat Management

A complete all-in-one Unified Threat Management package

The UTM combines our market-leading SWG web control solution with a perimeter firewall to provide a complete security package. Layer 7 application filtering and stateful packet inspection provide you next generation firewall functionality.

In addition, the UTM features real-time anti-malware protection powered by BitDefender, and HTTPS inspection. Combine all these features with a powerful reporting suite and real-time activity monitoring, and you can see and control everything your users do on the web.

Anti-malware protection

Intrusion detection & prevention

Perimeter firewall

Flexible deployment options

Smoothwall's UTM is an effective, single solution that protects your network and users against web and non-web borne threats -- even when they're taking your devices home or bringing their own devices on your network.

Smoothwall also offers a risk-free 30 day trial in your network.

Call us now at 1-800-959-3760 to get started today, or visit us online at www.smoothwall.com to get started.

The Web You Want

Key Features:

Next Generation Firewall

Perimeter firewall and internal segmentation firewall to protect your network against all web and non-web borne threats. Simple creation and management of firewall rules that is supported by powerful real-time logs.

Daily Reports & Alerts

Schedule customized reports on user activity that export to PDF, Excel and HTML, access a live view of users' web activity and receive notifications for policy breaches and network outages.

Who, What, Where, When

Build granular policies based on user or user group, content category, time, location IP, subnet and hostname for guest networks.

Bandwidth Optimization

Limit bandwidth use by content type, user, time and location, and web proxy cache.

Gateway Anti-Malware

Identifies signatures of malicious content at the gateway to protect against known and zero-day threats. Anti-spam provides advanced protection against email fraud, phishing and spam. Powered by BitDefender.

Anonymous Proxies

Block already known anonymous proxy sites. Filter web content provided through unknown anonymous proxies and file transfer sites with our content-aware analysis.

VPN

Supports both Site-to-Site (IPSec) VPNs and Remote Users (SSL and L2TP) for secure point-to-point and client connections.

BYOD

Offer public Wi-Fi filtering and filter guest mobile devices securely on your network across all platforms.

Off-Site Filtering

Enforce web usage policies on all district owned devices, even when they're not on your network. Integrate with a wide variety of devices and systems including iOS, Mac OS, Chromebooks and Windows.

Content-Aware Filter

New content is categorized into over 100 filter categories in real-time. Easily block specific search terms, enforce safe search on search engines, and even filter SSL traffic.

Layer 7 Application Control

Also known as Deep Packet Inspection (DPI) and allows you to control non-web traffic such as Skype and BitTorrent.

Authentication

Easily integrates with Active Directory, Google, Open Directory and more.
